DEVOPS – 16/03/2026

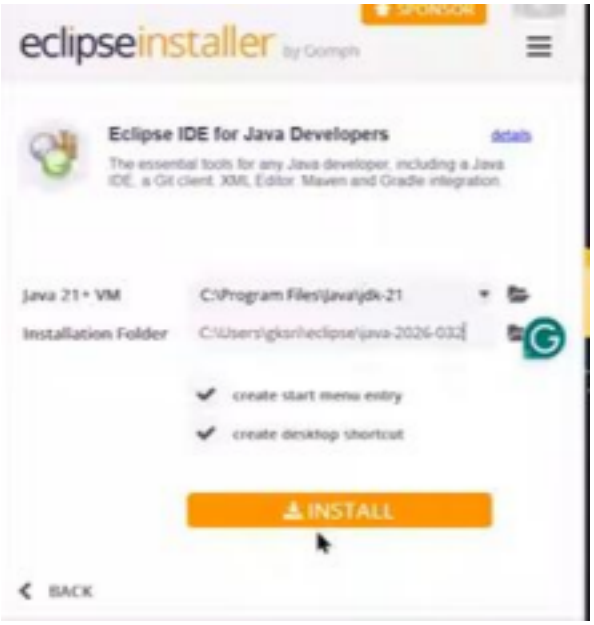
MAVEN – BUILD TOOL

Choose eclipse for java

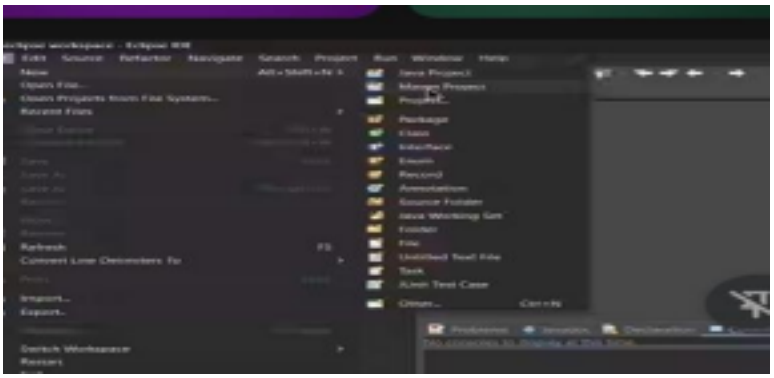
Choose path

Don’t change jdk path may be change

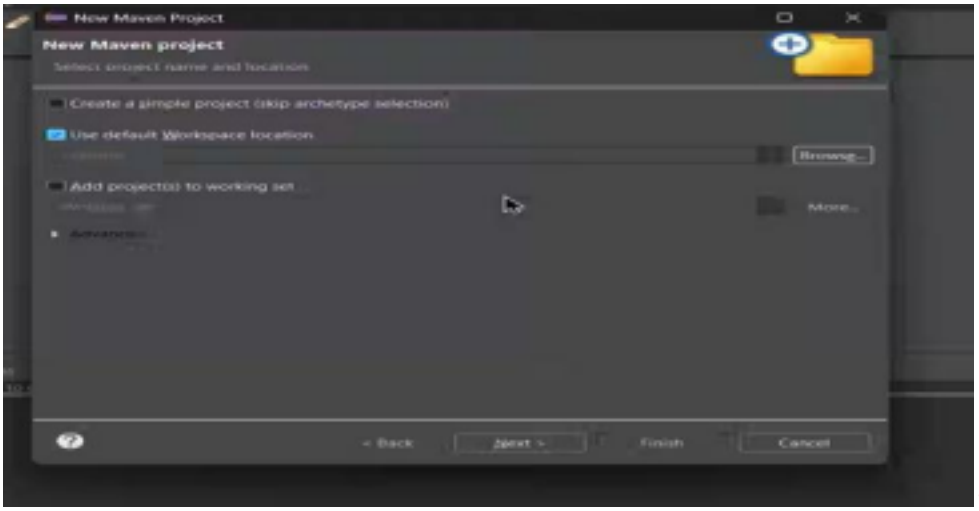
eclipse Then give install



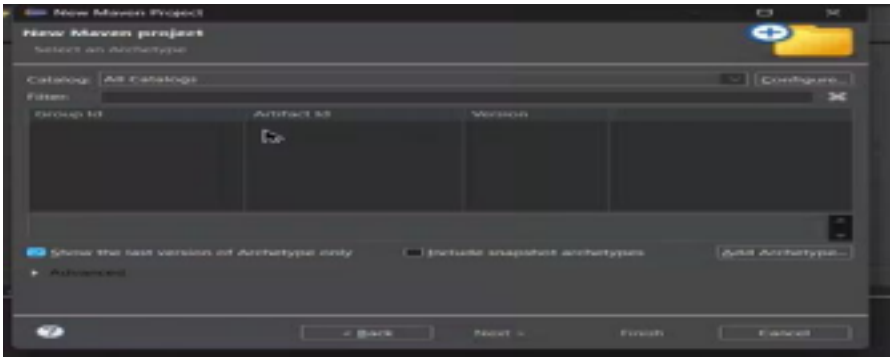
How to create maven projevtL



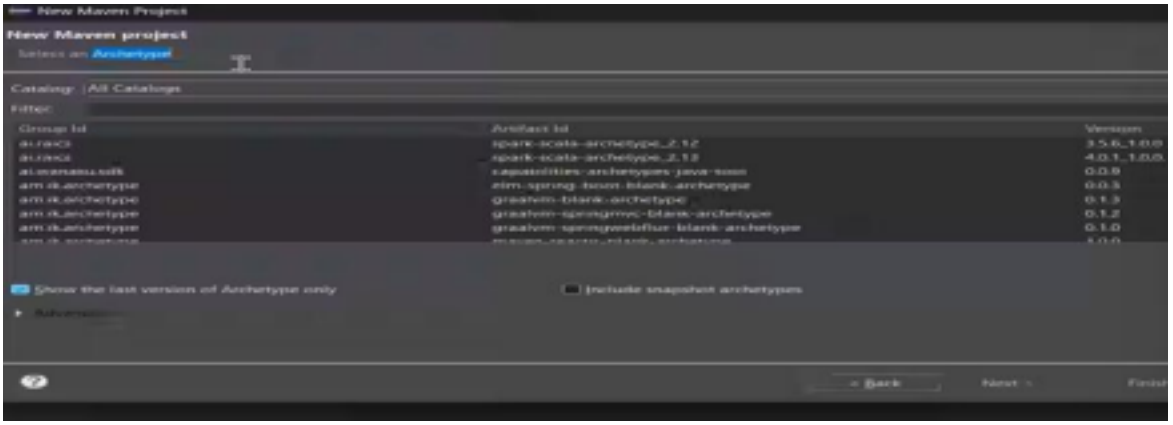
File –> new ->maven project



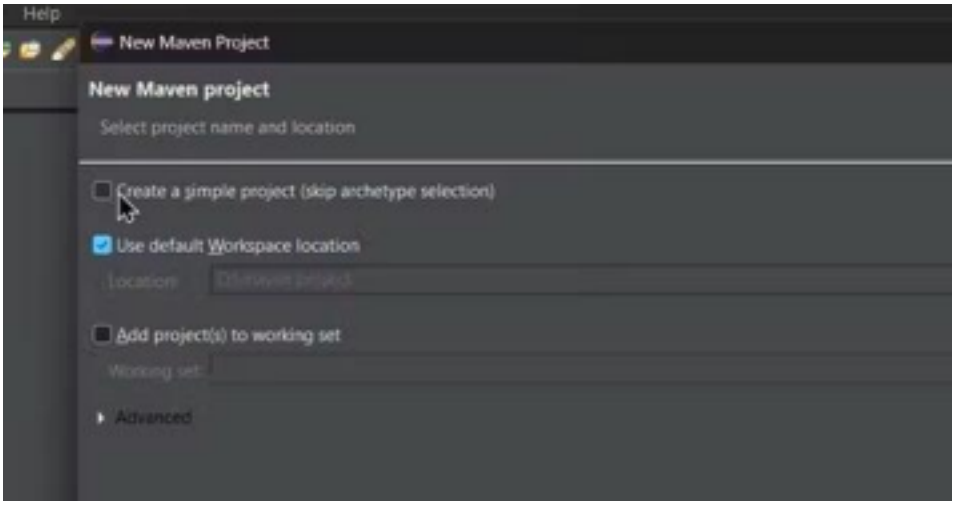
Select work space I mean where project should live click next



Artifact like structure of the project



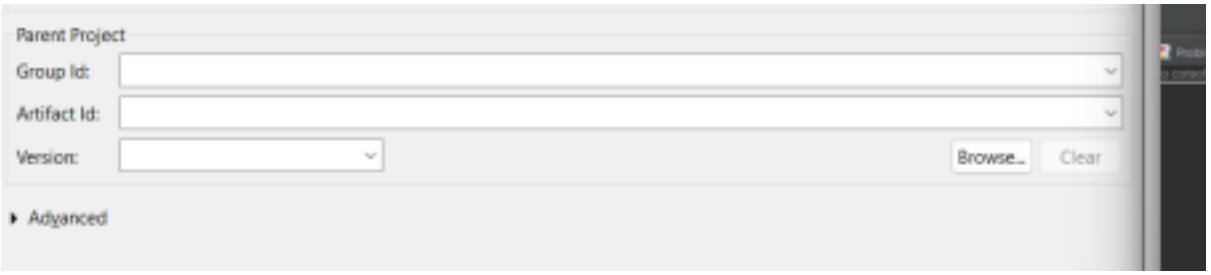
Choose what u want then maven create panni kuduthirum elsecome back create a simple project



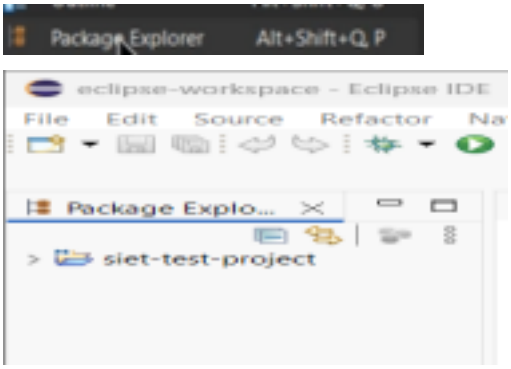
Click next then new Mven project page la irupom Groupid -> company name

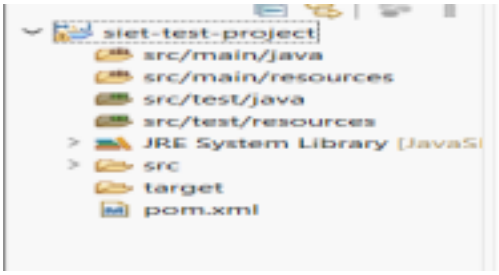
Artifact id -> project name

If project bases on another project then we can



Windows -> show view ->package explorer





/main/java

→ Source code should be in main/java
→ Developer's developing source code

/main/resources

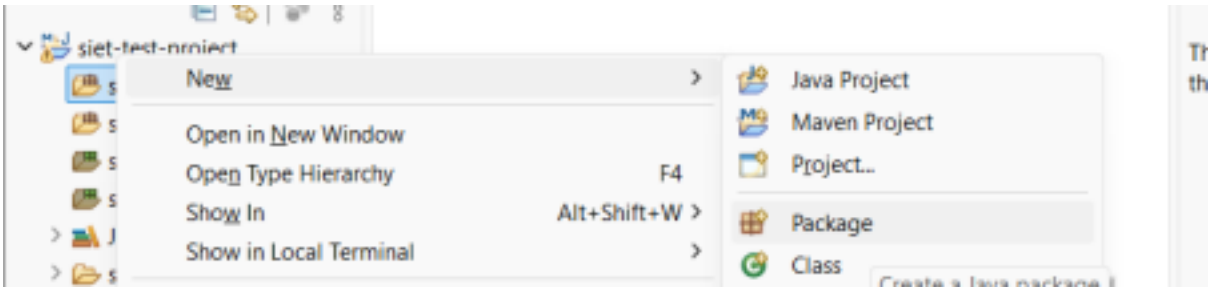
→ 3 rd party resoruces (audio,video)

Test/java

→ Test source code will be placed here

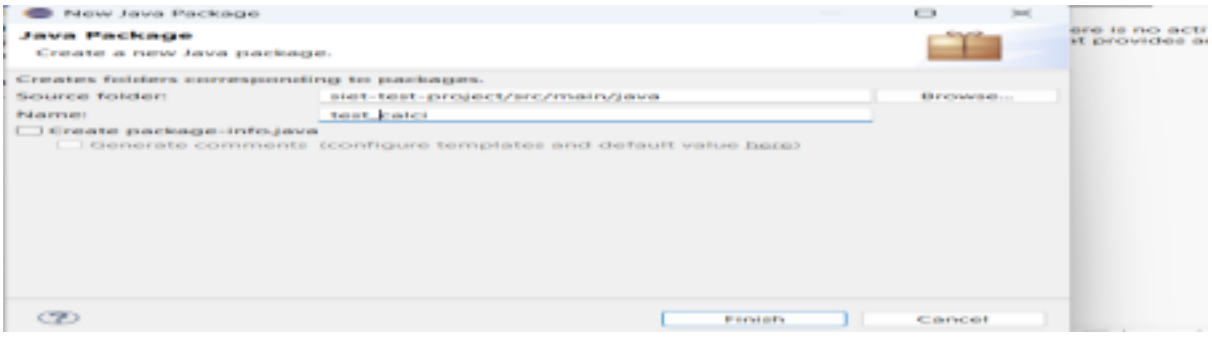
Pom.xml

→ Core of maven
→ We will have dependecnies (lib & packages)
→ We can define all inside this
→ Plugins - Plugins means small software add ons (extensions) that add extra features or functionality to an existing software or application. → Can add plugins using this
→ We can generate reports



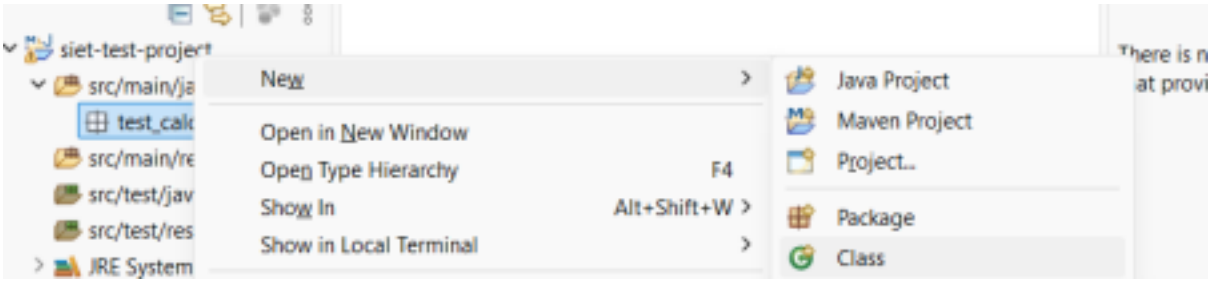
Create a package

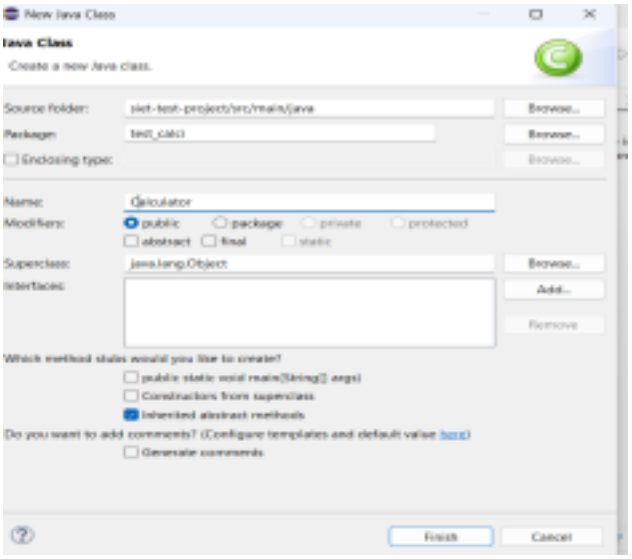
If package inside same class name I mean pack1,pack2 then they don't create a conflict



Click finish

Open that package





Maven has repo

Local repo -> our own project

Remote repo -> maven maintain own repo it has all req packages,dependencies

Then it will be pulled from global to local
Go to -> mvnrepository.com

<dependencies> create one paste

Test T should be in caps

Import packagname.className;

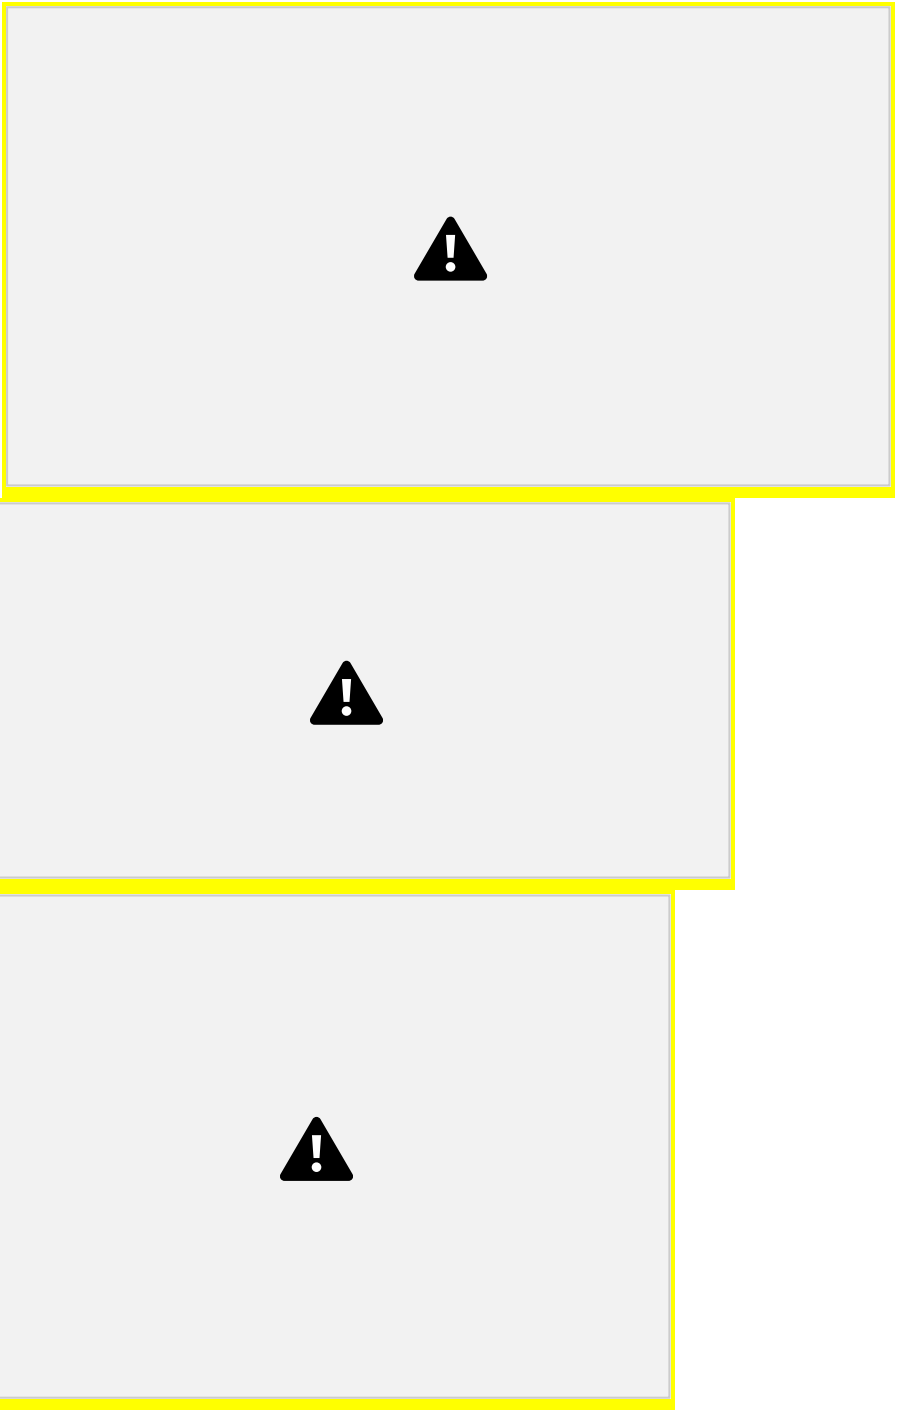
Main source code ah than intha test code ah we gonna implement

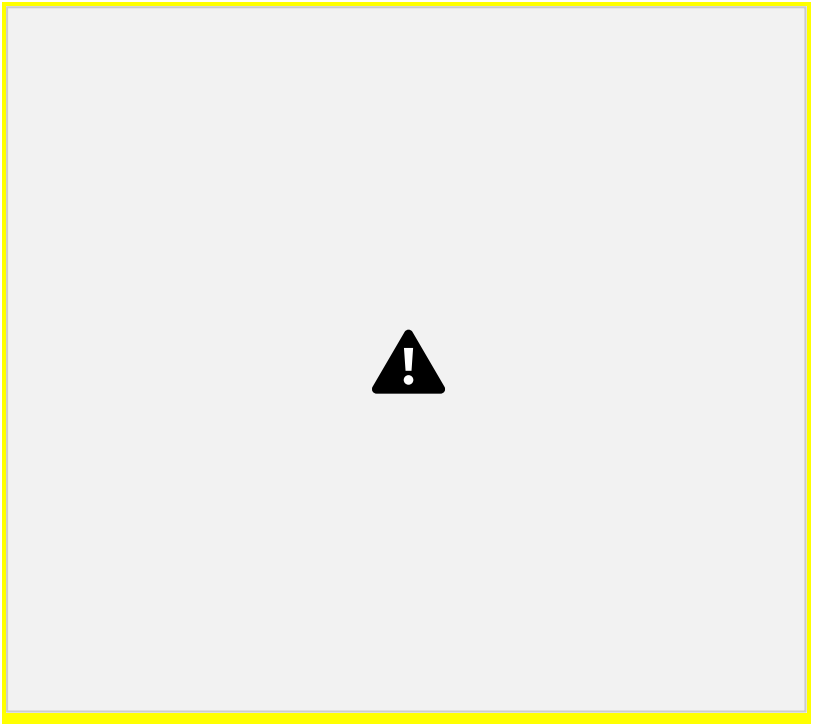
assertEqual chks whether output r equal or not equal -> test passed

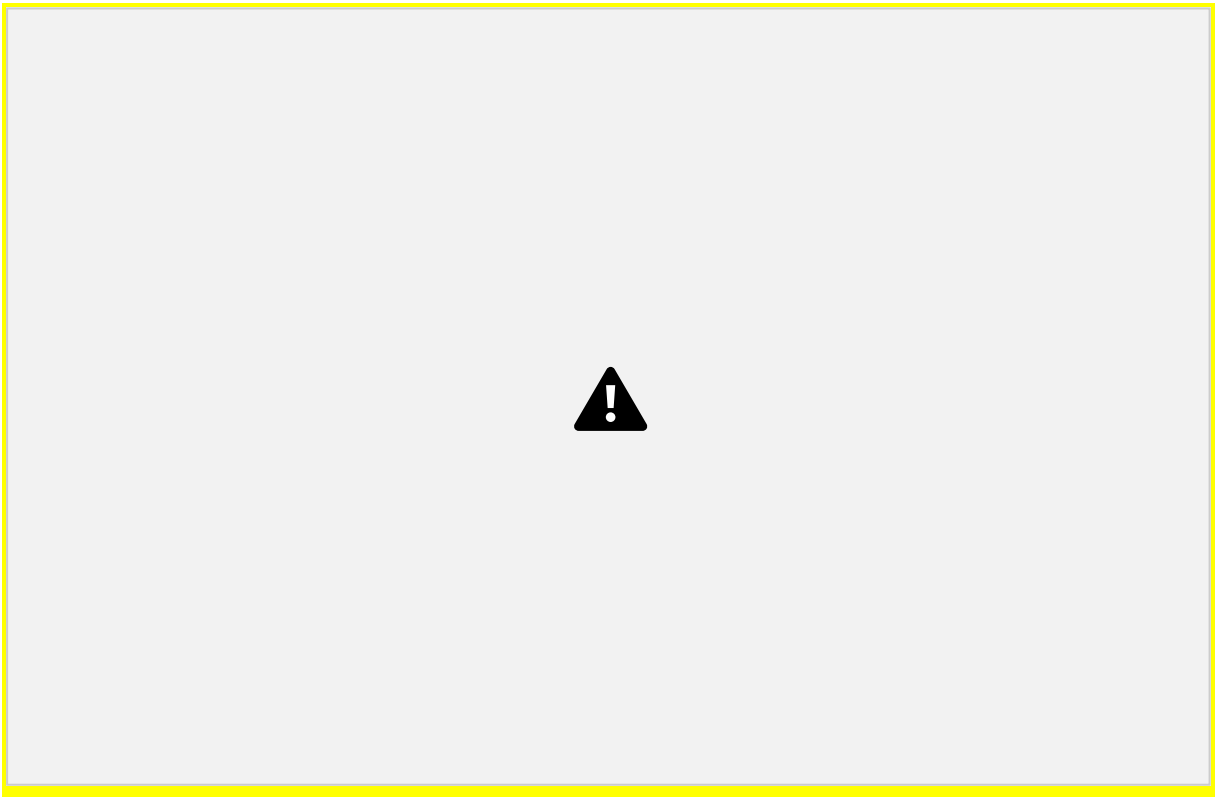
else -> failed

Click maven build then in goals namku ena action perform pannaumo we can type

Everythings comes under maven build







If tesNG iruntha test wont run so delete it remove from pom.xml

If we give package a jar file will be created

When we give maven cleam

To eun multiple commands at once

Cmd 1 cmd2

Download webdrive and selenium

Download :

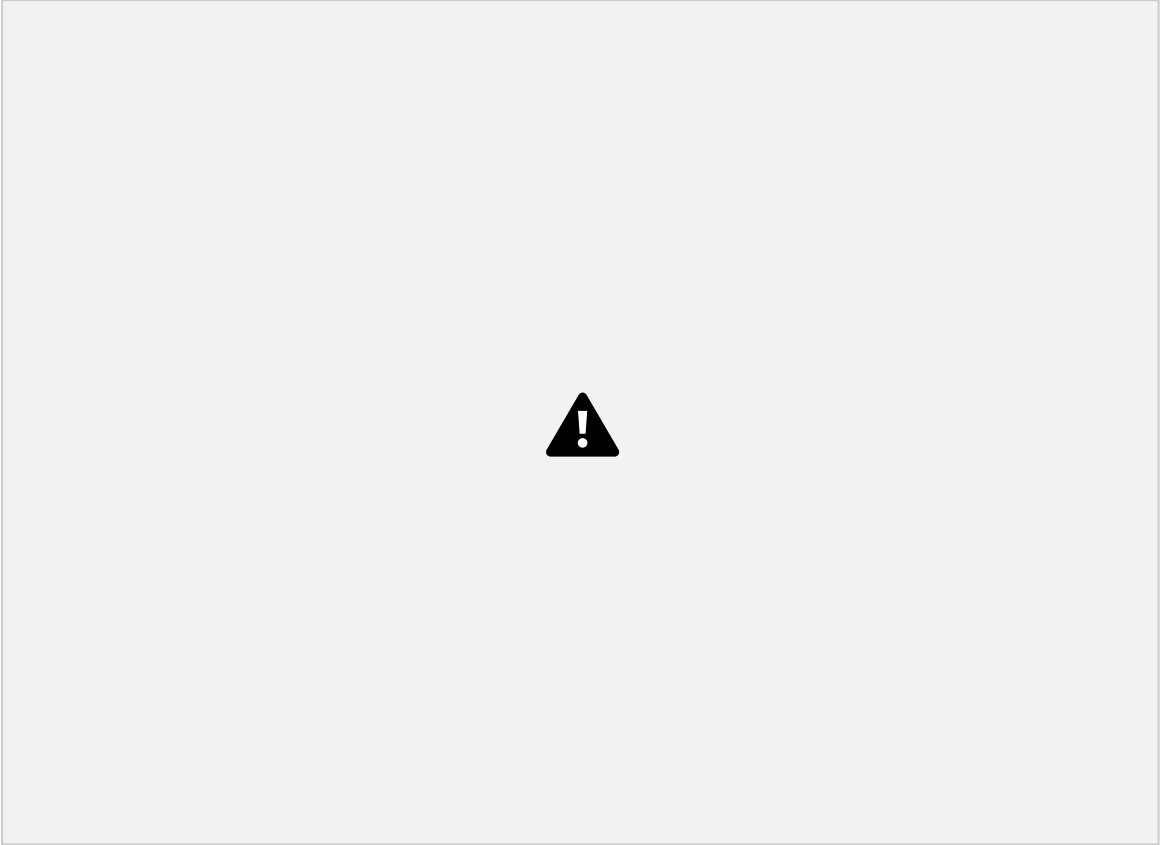
→ Selenium java

→

To generate reports:

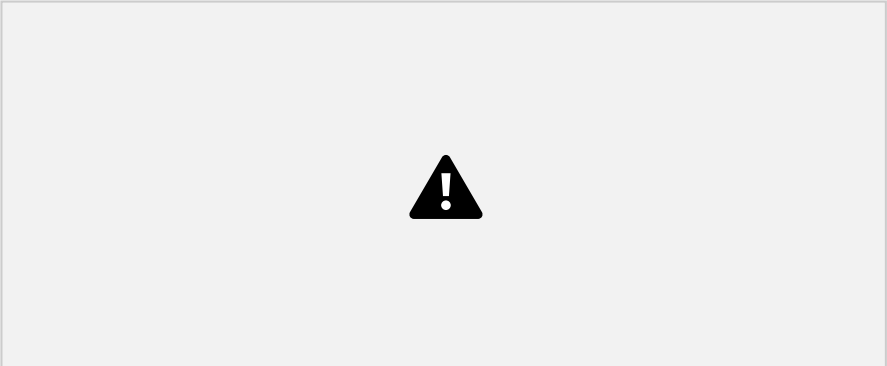
Copy from build alone:

1. <build>
2. <pluginManagement>
3. <plugins>
4. <plugin>
5. <groupId>org.apache.maven.plugins</groupId> 6. <artifactId>maven-surefire-plugin</artifactId>
7. <version>3.5.5</version>
8. </plugin>
9. </plugins>
10. </pluginManagement>
11. </build>



paste above dependencies then it will get downloaded
Clickpom.xml right click and run as MAVEN

TEST



MAVEN CLI INTERFACE

https://maven.apache.org/download.cgi

Binary zip archive -> download this

Extract it

copy path go to edit environment variables

In system variable add new then copy same path paste as these above name

In path system var also paste + \bin

Next go to project right click at last properties then copy path paste in cmd

a

How to generate report :

```
<reporting>
 <plugins>
 <plugin>
    <groupId>org.apache.maven.plugins</groupId>
 <artifactId>maven-surefire-report plugin</artifactId>
 <version>3.5.5</version>
 </plugin>
 </plugins>
</reporting>
```

Add this to pom.xml to generate report
